

MODEL 2162 COLOR LCD
MODEL 2163 COLOR IR BACKUP CAMERA

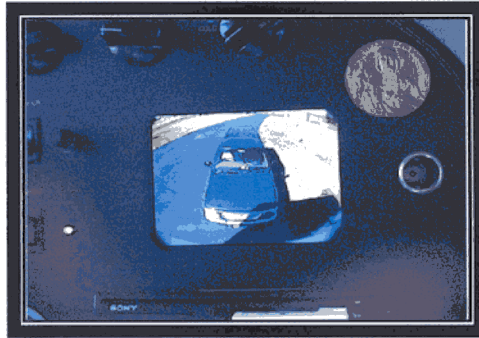

PUT SOME COLOR IN YOUR COACH
UPDATE YOUR BLACK & WHITE SYSTEM TO COLOR

Designed by the original equipment manufacturer, Javelina Corporation now comes an upgrade kit to enhance your Foretravel Motor Home. This kit includes the Model 2162 Color LCD which is a drop in replacement for the AUDIT 700 and AUDIT 800 black & white CRT monitor in Foretravel year models 1995-2000, and the Model 2163 Color IR (see in the dark) camera.

With the Model 2163 you will receive a Model 2156 IR Color camera, a new white powder coated camera grill and the alodined bracket to mount the camera to the grill. Model 2156 is a state of the art Infrared camera with a 2.97mm wide angle lens. This camera will absolutely let you see in the dark, while giving you a larger field of vision than your present camera without the fish-eye look. Model 2163 is completely compatible with your AUDIT tank monitor computer. The camera bracket is also adjustable to allow for the best visibility.

The Model 2162 LCD 5.6" monitor easily slips into existing mountings to replace the old CRT monitor so that you may enjoy seeing objects the way they were meant to be seen... in COLOR! The Model 2162 LCD features a state of the art 506" diagonal LCD mounted into a frame which fits in place of the old black & white monitor. The installation gives you the same OEM in dash look you presently have, but in color. (The tank monitor graphics stay in black & white). The new color LCD is approximately 2 inches deep, (as opposed to 11.5 inched deep on the black & white monitor) and mounts on the same studs as the old monitor.

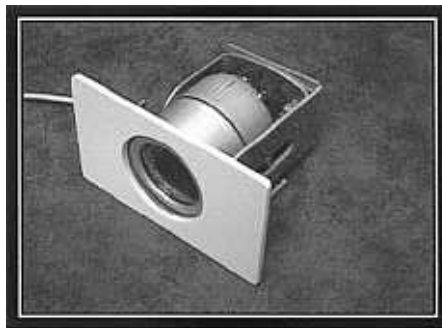

Combined, both systems upgrade your Motor Home to that of present day standards.

**Model 2162 installed in 1995 Foretravel Dash,
Area shown in monitor is up to 35' behind tow vehicle**
